

Our Latest Breakthrough in Turf Underlay

Second Bounce® – for the “true feel” and performance of a natural putting surface.

Second Bounce®, the latest turf underlay innovation from Turf Cushion, is a replacement for natural turf practice areas for chipping and putting. This synthetic turf underlay system has the “true feel” of a natural putting surface.

What we mean by “true feel” is that when you walk on a synthetic surface with a Second Bounce® underlay you have a feeling similar to walking on a natural putting surface. In addition, the 2-part underlay has been precisely formulated and manufactured to deliver performance characteristics similar to a natural surface. The surface will respond to the impact of a ball in a manner that allows the golf ball to check and roll more closely to the behavior you would experience on a natural putting surface.

Who can Benefit from Second Bounce®

Golf Courses and Clubs that would like a low maintenance putting and chipping system that has the “true feel” and ball reaction characteristics similar to a natural putting surface.

Driving Ranges and other dedicated practice facilities that want to offer an experience that will stand up to heavy use and continue to offer a first-class practice experience.

Homeowners who are installing a putting and chipping system that want the feel and ball reaction characteristics of a natural putting surface.

Benefits of Second Bounce®

- ✓ Closely approximates the “true feel” and ball reaction characteristics of a natural putting surface
- ✓ Stands up well to heavy use
- ✓ Low maintenance alternative to natural putting surfaces
- ✓ Economical alternative with costs approximating those of competitors without Second Bounce® performance characteristics
- ✓ Easy installation process

Installing Second Bounce®

Installation is quick and easy!

The patent pending, Second Bounce® underlay is a lightweight 2-part system.

Part A is made of 4' x 6' pads of 5/8 inch (16 mil) bead form molded, expanded polyethylene with drain holes.

Part B comes in 6' x 50' rolls of 3/16 inch (8 mil) plant-based, proprietary polyurethane.

The underlay system can flex to accommodate the contours of the putting surface.

Installation can be completed with simple hand tools, no power cords or expensive power tools needed.
